Action items

WARNING · 100.0% of the current inventory snapshot is incomplete.
Resolve the SKU exception register.

WARNING · Shop: disconnected.
Reconnect or synchronize this shop before relying on comparisons.

Data coverage and calculation notes

- SYNTHETIC TEST DATA — layout and calculation validation only. These are not live company statistics.
- 1 shops are disconnected, stale or have no recorded successful synchronization. Comparisons can be misleading.
- Inventory completeness, availability, valuation and active listings are generation-time snapshots. Historical week-end inventory and prior-week completeness are unavailable.
- New listings cover confirmed ERP eBay publications only; imported creation dates and Etsy draft dates are not publication evidence. Historical failed publication-attempt counts are unavailable.
- Cancellation/refund/unpaid exclusions recognize recorded status strings only. The eBay connector stores fulfillment status rather than a verified payment/refund ledger; comprehensive cancellation/refund counts and payment confirmation are unavailable. Marketplace amounts are recorded order totals, may include shipping/tax, and are not cash receipts, settlements or net profit. Refund, tax, discount and shipping amounts cannot be reliably separated. Net sales and consolidated historical INR are unavailable.
- Physical SKU counts, marketplace listing counts, order counts and item quantities are distinct measures. ERP sales/returns are separate ledgers and are not added to marketplace revenue.
- Certificate-required categories are not configured; certificate completeness is not assessed. Certificate document availability cannot be verified from CertificateCode reference data.
- Intervals are inclusive at start and exclusive at end. Orders use source orderDate, sales use saleDate, publications use workPublication.publishedAt; inventory reflects generation time. Percentage changes are N/A when the prior value is zero.
